

Water Purification Plant Visit

A visit to a Water Purification Plant was organized to provide students with practical knowledge about water treatment and safe drinking water supply. The visit helped students understand the importance of clean water in preventing waterborne diseases and promoting community health.

During the visit, officials explained the different stages of water purification, including sedimentation, filtration, chlorination, and storage. Students observed how raw water is treated to remove impurities, harmful microorganisms, and contaminants before being supplied to the public.

The visit enhanced students' understanding of environmental hygiene, public health measures, and the role of water treatment in disease prevention. It was an informative and educational experience that connected theoretical knowledge with real-life practice.
